

One & Two day Introduction to Digital Photography Course.

1 day - £115.00 2 days- £180

**Nottingham – London – Bristol –
Birmingham – Manchester-Leeds**

Red Cloud Photography Days delivers fun, creative, hands-on workshops, that specialise in providing you with the skills to enjoy digital photography to its maximum.

We don't like boring lectures, so we can't expect you to either. Photography is about having fun and using your creative side to explore a whole new world through the lens of a camera.

We cut out the unnecessary jargon and fluff to deliver interactive photography workshops, where you'll instantly improve your skills, with confidence to enable you to get out there and capture those precious opportunities on camera.

One day course.

This one day course will include several workshops in aperture, shutter speed, ISO, white balance and exposure control. It will also include the rules of compensation and how you can apply them creatively to improve your photography. You'll learn how to create depths of field and how to produce a sense of movement to capture the action.

Other aspects covered include white balance, ISO and good exposure. We don't like too much theory and whilst you will learn the important lessons of how the camera works, we'll also get you out there using your camera and taking photographs

Two day course.

The second day will be a re-cap of the first day and then we'll take you out to a nearby location, where you'll take part in a detailed photo-shoot. You will be given a set brief with specific tasks for your brief that you'll have learnt from the previous day's session. You will have the course trainer with you but you'll be rolling your sleeves up and getting 'creative' by putting into practice everything you have learnt.

We'll then head back to view the images taken, so we can ooh and ah at your new creative talent, critique, give tips and ensure you have picked up the necessary skills to enable you to be let loose onto the world! We'll then cover other aspects of photography, such as exposure compensation, focusing points, raw V jpegs, filters and more white balance.

Arrival: arrival is 9.30am for a 9.45am start and the course usually ends at 4.30pm.

Testimonial:

"I attended the 1-day beginners photography course and was extremely happy with the day. The venue was excellent, course content superb and the tutor was great.

Course content was very clear and it was explained to us on a level we all understood, anything that wasn't grasped first time around was explained again until we understood.

I feel I've learnt a lot more than anticipated and now have a good understanding on shutter speed, aperture, ISO and white balance and how to use these to get good looking photos.

I would definitely recommend this course to anyone looking to book on a beginners course and will be getting myself down to the next advanced course Red Cloud offer."
- Matt Giles, Telford, 16th May
